Table Legend

Column Definitions

SMS, WAP, APP: These are the channels that are supported in Customer Manager per device type.

WAP Devices: This section breaks down the different device types for the WAP channel. This includes Base Browser and Touch Browser.

APP Devices: This section breaks down the different device types for the APP channel. This includes APP-Java and APP-Blackberry (Java).

Because different devices run different instructions, the same code is used to produce three different binaries (for APP): Java, Blackberry, and Blackberry large. Therefore, in the supported handset list, the devices are broken down into two types: APP (Java) and APP-Blackberry (which includes both Blackberry and Blackberry large. There is no differentiation between these types.).

Status Definitions

Full: The phone has been confirmed as supporting Mobiliti's method of delivering mobile content via the specified channel.

Unknown: Specific testing has not been executed against the phone. The particular delivery method may or may not work, but since the specific device has not been verified it is listed as unknown.

No: The phone does not support the technology
